

SLO Roster and Scoring Template

The roster on the following page should be used to organize data for the Student Learning Objectives according to the following directions.

1. The SLO Roster and Scoring Template should be completed after the Student Learning Objective Template (Appendix C) has been completed by the teacher and approved by the evaluator.
2. Teacher enters the name of each student in the assessment population onto the scoring template on the following page. Use additional sheets as needed.
3. Administer the baseline assessment, record scores on the scoring template and submit to evaluator by October 1st.
4. After an analysis of baseline scores, historical data and other pertinent information with the evaluator, the teacher enters each student's established growth target. Growth targets should be rigorous, yet reasonable targets of student growth appropriate for that individual student.
5. After administration of the mirrored midpoint assessment (a comparable assessment aligned to the identified standards that measures two or more points in time), teacher enters student score onto the scoring template.
6. After administration of the mirrored final assessment, teacher records data on the scoring template for the final score and indicates in the far right column whether each student met or exceeded the established growth target.
7. The total number of students who met or exceeded the projected growth target is entered at the bottom of the scoring template and converted to the corresponding rating.
8. The completed SLO Roster and Scoring Template is submitted to the evaluator by February 1st.
